DETAILED ACTION

1. Claims 1, 3-8, 10-13, 15, 17-19, 21-25, 31, 33, and 35 are allowed. Claims 2, 9, and 14 have been canceled and claims 21-31 have been added in applicant's amendment filed 12 January 2007. Claims 26-30 have been canceled and claims 32-35 have been added in applicant's amendment filed 12 September 2007. Claim 36 was added in applicant's amendment filed 16 May 2008 and has been canceled by examiner's amendment.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tiberiu Weisz (Reg. # 29,876) on 12 August 2008.

The application has been amended as follows:

Claim 8 has been replaced with the following:

8. A player reading data from a disc having at least one of two configurations, in one configuration the disc having data arranged along a right handed spiral on both sides of said disc, in the second configuration the disc having data arranged along a right handed spiral on one side and a left handed spiral on the other side of said disc, said disc further including a lead-in area with machine-readable rotation specific lead-in data indicating the proper direction of rotation and other characteristics of the disc, comprising:

a first laser head positioned to read said machine readable rotation specific lead-in data from the disc as the disc is rotated by a motor to determine the proper direction of rotation of the disc;

a controller coupled to said reader and generating a command in response;

a the motor receiving said command and rotating said disc in a corresponding direction,

Art Unit: 2627

wherein said controller cooperates with said motor to rotate said disc in one of a first and second direction to determine the configuration of the disc,
wherein said disc has a lead-in area on both sides of said disc, and
wherein said controller reads both said lead-in areas to categorize said disc.

In claim 17, lines 15 and 16: "attempting to read the lead-in data from said disc in second location of said one of two locations as the disc is rotating in said opposite direction;" has been changed to "attempting to read the lead-in data from said disc in the other of said two locations as the disc is rotating in said opposite direction;".

Claim 36 has been canceled.

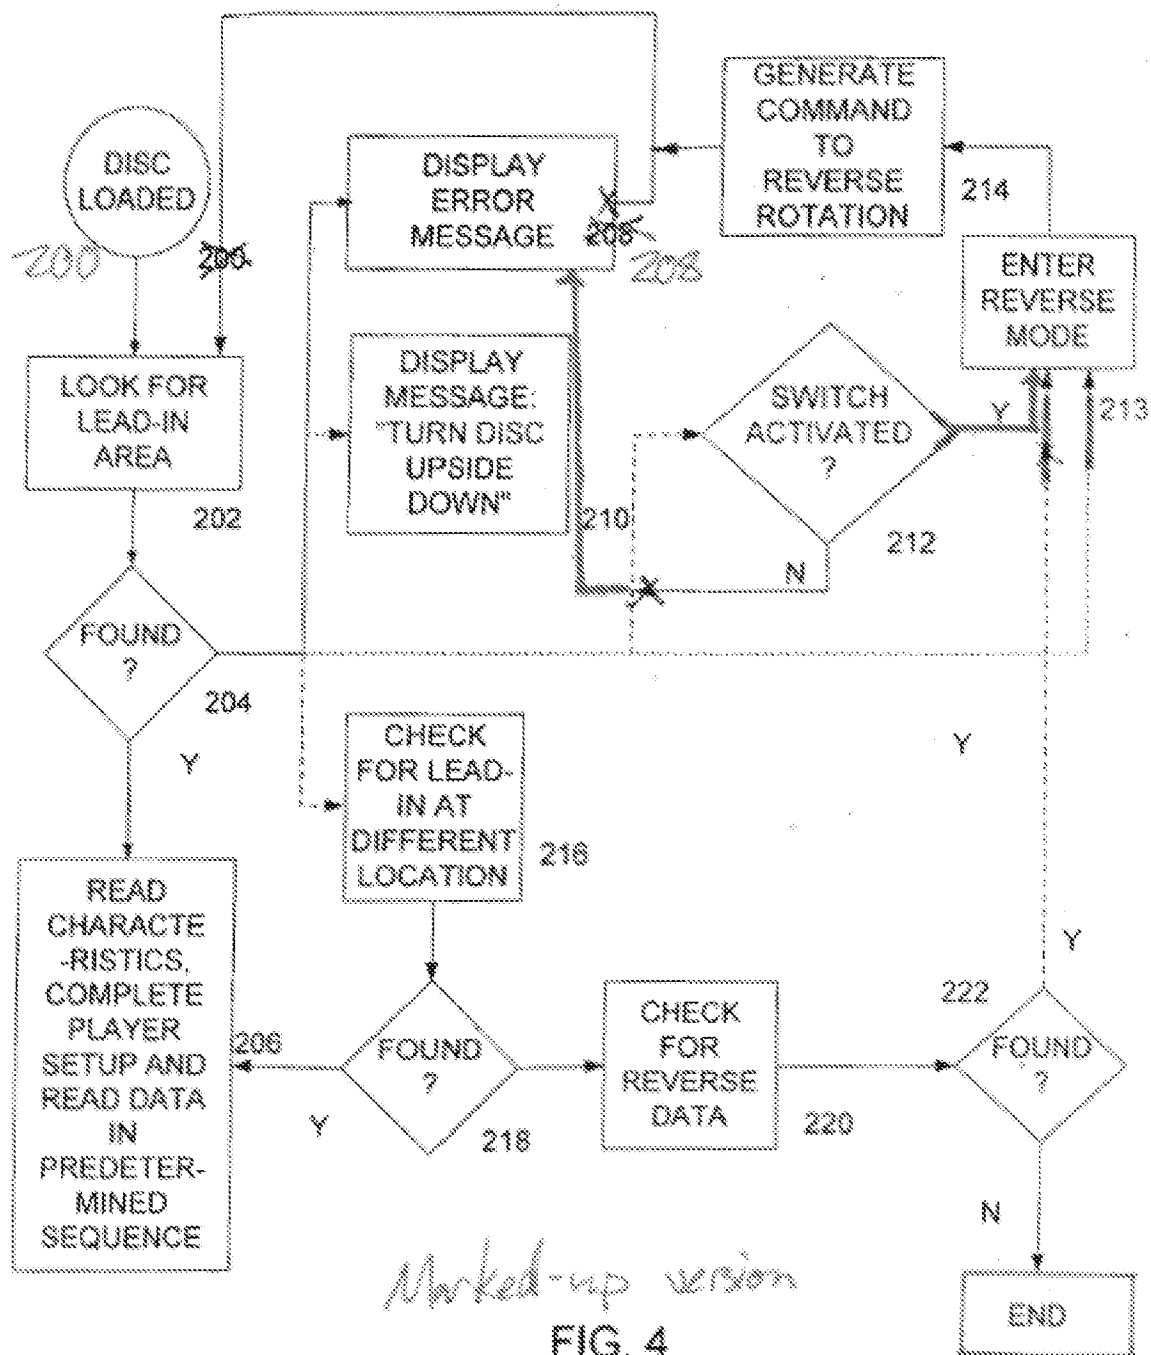

3. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: see the marked-up copy of figure 4 on page 4 (see page 14, line 18 through page 15, line 8 in the specification for support for these changes). In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes. For applicant's convenience, a corrected copy of figure 4 incorporating the changes in the marked up copy of figure 4 has been provided on page 5.

Allowable Subject Matter

4. The following is an examiner's statement of reasons for allowance: the prior art of record, either alone or in combination, fails to teach or fairly suggest the characterizing of a disc as at least either of a first configuration or second configuration including the first configuration having data arranged along a right handed spiral on both sides of said disc and the second configuration the disc having data arranged along a right handed spiral on one side and a left handed spiral on the other side of said disc on the basis reading a lead-in data from two lead-in locations on the disc.

Art Unit: 2627

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2627

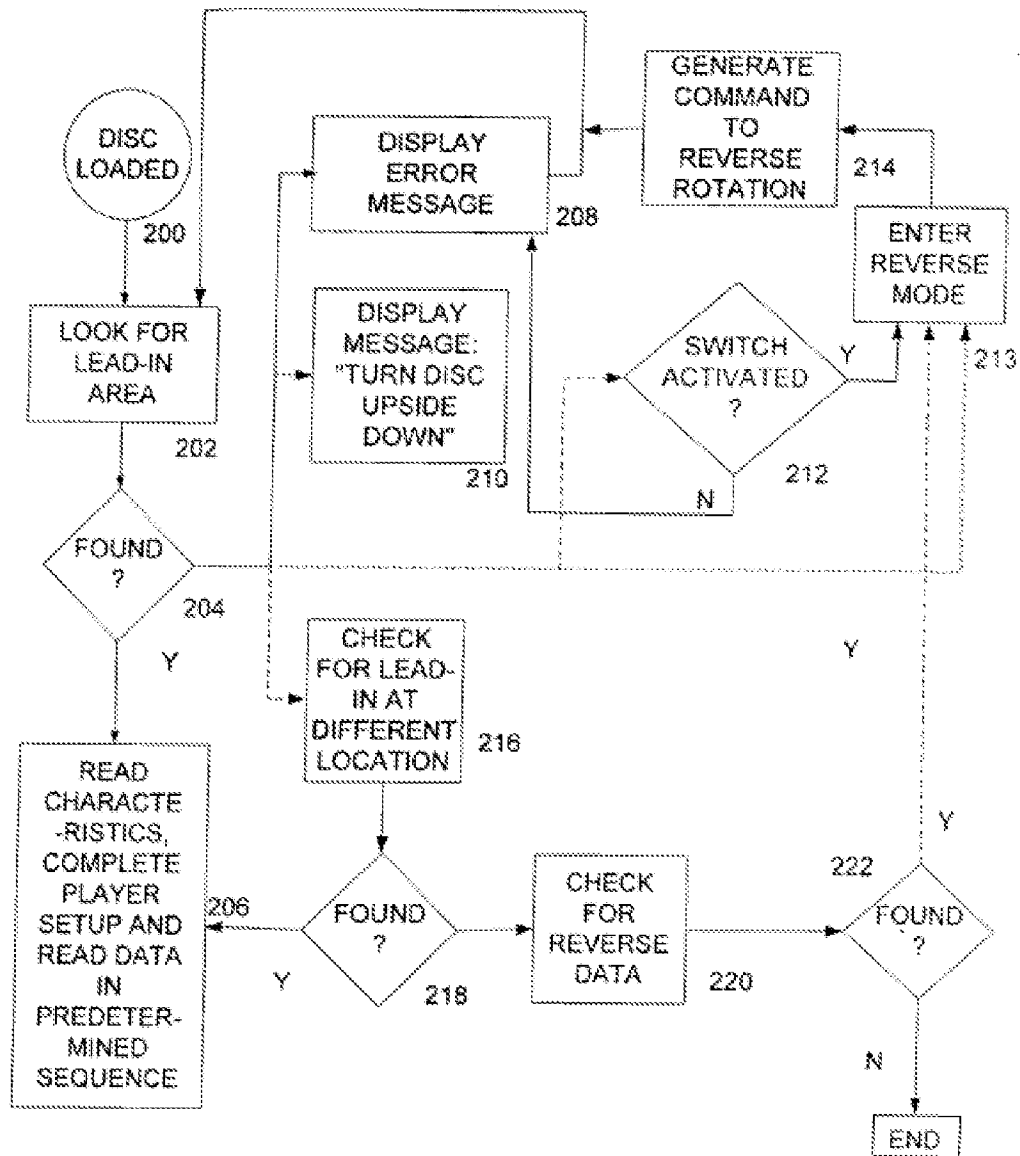

FIG. 4

Art Unit: 2627

Citation of Relevant Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. Okamoto et al (US Patent 4,903,140) and Han (US Patent 5,289,449) discloses apparatuses and methods for determining the proper direction of rotation to read data from each side of a double-sided optical disc by reproducing the lead-in data of the side facing an optical pickup.
